It is my pleasure to emphatically recommend California Clean Energy.

Our long-term goal of being the best possible stewards to the environment was realized with the help of California Clean Energy. They patiently and clearly addressed every question and concern we had, and most importantly, designed a power purchase agreement that met our specific needs and requirements. Their expertise with non-profit organizations was on display every step of the way.

They are true partners in every sense of the word, and we couldn't be more pleased with them and the results of the project.

We've had a very positive relationship with California Clean Energy. From the beginning we've appreciated them accommodating the issues that came up and how they were able to work through it and fix them. Their transparency about all the details that went in to making the solar system set up work on an older roof was amazing. It is great to know that we have a great working relationship with CCE and that whenever there are questions or concerns they are right there to guide us through and always with a willingness to do whatever it takes. This customer service is a rarity and very much appreciated. We feel we're all on the same page and pulling together in the same direction.

As a non-profit organization we were unable to take advantage of tax credits and the cost of installing solar. After researching many companies, we found CCE. Our electric rates were extremely high and we knew we needed solar to help with the increasing cost of electricity. The Power Purchase Agreement with California Clean Energy was the only logical solution for GACC and Noah's Ark Preschool.

California Clean Energy has been great to work with. Twice a year they send out a company to clean the panels which is great because they are difficult to reach. We highly recommend CCE to anyone looking for a solar solution and look forward to working with them for the duration of our contract.

California Clean Energy

To Whom It May Concern:

We have worked with California Clean Energy for the past few years and are quite pleased with the quality of service provided. We were fortunate to have a recommendation from the Diocesan Solar Projects Manager along with his expertise guidance during the construction.

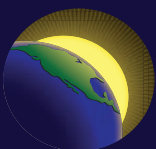

The CCE staff is easy to work with is very accommodating in responding to our questions and needs (even during the pandemic shut down). During these challenging times, it is nice to know we decided to help conserve energy being good stewards of our environment and saving money our parishioners contribute and entrust us to spend wisely.

Thanks to CCE for their help and guidance throughout this process. It is nice to know they are a phone call away if we have a question.

Sincerely,

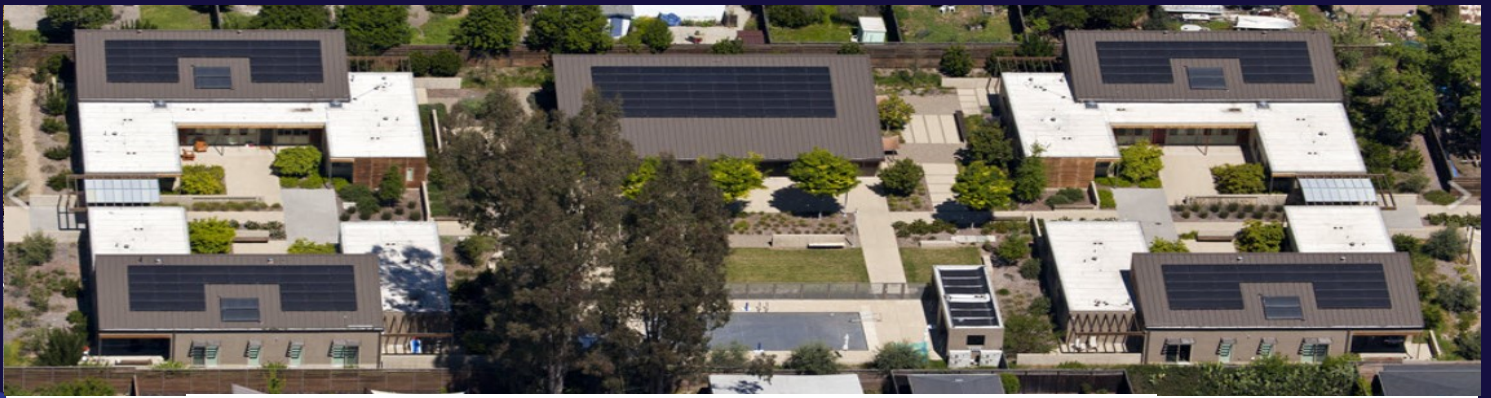

A handwritten signature in blue ink that reads "Robert J. McCann".

I am writing to highly recommend the services of California Clean Energy. Sweetwater first began working with CCE as part of the construction of our campus in 2012, where a rooftop solar system was part of the overall campus design, financed via a Power Purchase Agreement.

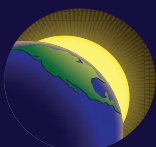

When I joined our non--profit organization in 2016 as Executive Director, I found the solar system delivering as originally projected, and CCE functioning as an effective partner, whether that was answering my questions, interacting on monitoring and maintenance issues, or anything else that arose.

In 2019 we determined that Sweetwater could benefit from an expanded solar system to provide nearly 100% of our total energy needs, and we didn't hesitate to look to our original solar provider, SolarCraft, with CCE again as the financing agent. The design, construction and operation of this 2nd system has been a smooth process, performing as expected since "cutover" in June 2020. Once again, our partnership with CCE has been nothing but positive.

Sincerely,

Kory Stradinger

CALIFORNIA CLEAN ENERGY, LLC LETTER OF RECOMMENDATION

To Whom It May Concern:

It is our pleasure to recommend to you the services of California Clean Energy. We first engaged with this company in 2018 as we begin to consider the possibility of a solar project on our property. California Clean Energy came highly recommended to us from the Diocese of Oakland and they were nothing but professional and supportive throughout the process from start to finish and continue to be so today with the project now fully operational.

We went through many design reviews and had many questions throughout the process and they had patience with us and took the time to make sure all of our questions were answered and all of our needs were met. In fact, our Finance Chairperson, Robert Calone, had the following to say, "California Clean Energy was pleasant to work with, they were cooperative and fulfilled our expectations."

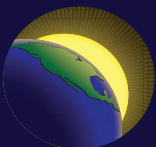

With the system in place and working to capacity, we are happy with our decision and pleased with the savings to our electrical bills, particularly in these difficult times. We are also pleased that our partnership with California Clean Energy continues to be mutual and professional as we continue to move forward on our path to being good citizens of the earth.

Sincerely,

Fr. Thi Van Hoang

Parochial Administrator

May 1, 2020

From conception to completion California Clean Energy guided us through the Power Purchase agreement. California Clean Energy personally responded to all of my inquiries, basically holding our hands as our community began the process of getting the majority of our homeowners to agree to go solar. Without their detailed emails I do not think it would have been possible for all 105 homeowners to return ballots with 104 homeowners wanting to move forward with clean solar energy. The system will produce all, if not most of our common area energy needs. This includes all common area lighting, boilers, elevator, laundry, pool pumps and garage gates. Working in conjunction with SolarCraft the system was quickly and professionally installed. We received weekly progress reports keeping us informed of each stage of the permitting, working with PG&E, Solar Craft and most importantly California Clean Energy.

We are now pumping out solar kilowatts while being greener and reducing our carbon footprint. Doing our seemingly small, yet more importantly, our part in the larger picture of reducing the use of fossil fuels and helping to leave our future generations with a blueprint to do the same. One of the coolest parts of the system is the ability to monitor the systems production in real time through the Fronius software to make sure it is operating correctly. Hopefully one day by all of us choosing clean solar energy the technology will continue to evolve with California Clean Energy helping our State of California lead the way. Thanks again CCE and everyone that has helped us along the way.

We've had a very positive relationship with California Clean Energy. From the beginning we've appreciated them accommodating our small project as well as the transparency about all the details that have gone into making it work.

The biggest impression that we have is that we feel we are in a relationship with CCE. We feel we're all pulling together in the same direction. Much of that is due to the way their staff relates to us through any issues that may come up.

We look forward to working with them for the duration of our contract.

Cherokee Memorial Park & Funeral Home

June 25, 2019

I wanted to follow up and express how thrilled we are with the service you have been offering Cherokee Memorial Park. As you are aware Cherokee Memorial has completed 2 separate projects with California Clean Energy. Each project was easy to navigate, met our needs, and is a huge financial benefit to our company.

As your business is expanding, I would like to share some of my experience with you that can be shared with others, and as I have always mentioned, potential clients are always welcome to reach out to me if they would like to see our system in person.

One of our goals here at Cherokee Memorial was to maximize our monthly cash flow. As we worked with our solar contractor and California Clean Energy it became apparent that we were going to be able to save a significant amount of money each month. The production from the solar that we were purchasing back from CCE was 25% less than the current rate we were paying with PG&E. Once we realized the savings the rest was very easy on our part. The system was priced by our solar installer and then final numbers and cost came to us from CCE. We had our legal counsel review the contract and we proceeded forward. The system cost Cherokee Memorial zero out of pocket and we started seeing the savings right away. Since the solar payment to CCE is the same each month it has made budgeting a breeze for our utilities.

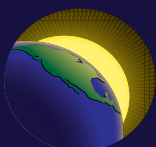

After the system was installed our local installer was setup to monitor the system and if any issues arise they are out to make repairs and ensure maximum production. We were so happy with the first system, we installed another one less than 18 months later. California Clean Energy is great to work with. They are straight forward with their terms and billing. Twice a year they send out a company to clean the panels which is great.

For anyone looking to work with California Clean Energy, I highly recommend them.

First Congregational Church of Sonoma
United Church of Christ
an inclusive community of faith seeking peace and justice for all

First Congregational Church of Sonoma

United Church of Christ

February 20, 2018

In 2014 our Earth Care Committee researched and developed competitive bid proposals with several solar contractors to install a solar system on our church campus. Two very similarly sized solar system proposals (48 solar panels) were then submitted to us.

The cash-purchase price of either system was approximately \$49,000. While a cash-purchase of the system offered the highest rate of return (about 10% annually), there were other finance options that involved no up-front costs for us, but with a lower rate of return.

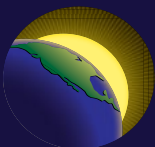

To sort out these financing options, it was especially helpful that we were connected to Jeff Ilfeld and California Clean Energy (CCE). Jeff readily volunteered to come to Sonoma to meet with our Committee. He helped us understand how a Power Purchase Agreement (PPA) could enable us to (1) contract for the installation of our solar system with no up-front costs; (2) pay CCE a locked-in electricity rate for clean energy during a 12- or 18-year PPA contract; (3) defer all necessary equipment and repairs to keep the system operating, and monitored, to CCE as the owner of the solar system during the PPA contract term; and (4) buy the solar system from CCE any time after 6-years so as to increase our annual budget savings going forward. In the first year our solar system saved our church's utility budget approx. \$1500.

Our committee is unanimous in recommending Jeff Ilfeld and California Clean Energy to you for financing a church solar system. He never hesitated to "go the extra mile," – the "extra call or email," – to help us fully understand the benefits and costs of the various finance options available to nonprofit churches. Not only is Jeff a delightful person, he is most generous with his time, patience and expertise. In short, if your church is considering "going solar" do not miss this opportunity to meet Jeff Ilfeld and California Clean Energy. We strongly recommend Jeff and CCE without any reservations whatsoever!

Sonoma Community Center

August 19, 2019

In March of 2018, the Sonoma Community Center (SCC) entered into a Solar Facility and Power Purchase Agreement with your organization.

SCC had been considering incorporating solar power as a resource to reduce our carbon footprint for the community and reduce costs. The project would not have taken place were it not for the relationship we were able to establish with California Clean Power.

As a non-profit organization we were unable to take advantage of tax credits. The cost of our 87 Kilowatt installation would be prohibitive if we needed to purchase the system. The anticipated increase in electric rates made the Solar Facility and Power Purchase Agreement with California Clean Energy the only logical path forward for SCC.

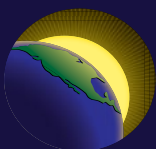

SolarCraft was our solar system provider and facilitated our relationship with California Clean Energy. Our experience with both organizations has been excellent and we would recommend such a relationship for other non-profit organizations considering a move to solar energy.

Thank you for providing a funding structure for non-profit organizations allowing affordable strategies to achieve energy alternatives and long-term energy cost savings.

California Clean Energy was recommended by our salesperson and after looking at their track record of projects with other churches we were confident to move forward.

This project gave us the opportunity to lock in long term savings on our energy costs. Everyone on our board felt this was a wise financial decision for the long term.

We are happy with the customer service we are getting and so far the savings have been good. We would work with California Clean Energy again in the future.

Community Presbyterian

August 14, 2019

Community Presbyterian Church has been associated with California Clean Energy for a little over 4 ½ years. They are a quality company and it has been a joy to work with them. They are responsive to any questions we may have and in a recent maintenance situation they alerted us to the problem and insured a repair was completed to our satisfaction in minimal time.

We have found that their initial energy savings projections were conservative, and we saved well over \$7,000 in just the first year. We continue to enjoy greatly reduced energy costs since.

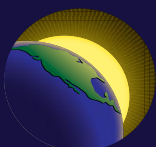

The Solar Power Purchase agreement by California Clean Energy provided us a way to take advantage of solar power, reducing our energy costs, and provided a solar system without a large cash outlay. Additionally, we have no maintenance worries for the duration of the agreement.

Community Presbyterian Church highly recommends California Clean Energy and we value our association with them. It's been a good "fit" for us.

Theodore R Miller

The Dominican Sisters did extensive research and California Clean Energy seemed to be the best choice. You were highly recommended by a large company who works in the Diocese of Oakland as well. You worked seamlessly with the installer to get the job done. From the very beginning, when the tech came on site to assess our project, we felt we were in good hands. It proved to be true. We are very happy with the customer service. We would definitely work with California Clean Energy again!

Episcopal Church of Our Saviour Mill Valley, California

August 7, 2019

California Clean Energy's partnership with Church of Our Saviour, Mill Valley allowed us to achieve energy independence with a renewable solar energy source, for which we are eternally grateful. You provided the expertise to help us easily navigate the acquisition process as well as a simple, affordable way to finance the purchase.

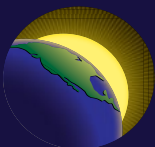

Your mission to help not-for-profits achieve energy independence is an invaluable gift to the community and Church of Our Saviour, Mill Valley. Like many other not-for-profits you have helped, we could not have achieved our goal without you.

Our sincerest appreciation.
